FOR COMMUNITY ADMINISTRATORS

What We Offer Founding Leaders

We are not seeking capital. We are seeking conviction. The founding custodians at each institute will shape the character of that community for years. Their judgment, their relationships, and their early participation determine whether the community becomes genuinely great or merely functional.

Founding Custodian Status	Completely Free in 2027	A Say in 2028
You will be among the first three custodians of the AIIMS Delhi chapter. Your profile, your participation and your judgment shape the community before anyone else joins.	Every member — and every founding custodian — participates at zero cost throughout 2027. No payments, no subscriptions, no administrative fee for your time.	If the community decides to introduce a contribution model from 2028, that decision will be made jointly with all founding administrators across every institute.

The Admin Structure

Each institute chapter is anchored by up to three Founding Custodians — selected alumni who understand the community, hold the trust of their peers, and are willing to shape governance from the very first conversation. A Ritanya Sanstha staff administrator supports them with platform operations and technical onboarding. The custodians govern; Ritanya runs the infrastructure. Neither can override the other in their domain.

On Contributions and Sustainability

In 2027, there is nothing to decide about money. The platform is free. The founding year is about demonstrating value — to members, to each other, and to the wider community that will look at what we build. If and when a contribution or sustaining model is introduced — from 2028 onward — that conversation will happen at a table where all founding administrators are present. No institute will have a model imposed on it. Whatever contributions come in will flow back in part to the chapter administrators who made it possible. These are commitments, not projections.

What We Ask of Founding Leaders

1. Register as a Founding Member

Create your verified profile on the institute portal. This takes 10 minutes and signals to every subsequent member that the founding generation is here and committed.

2. Shape Governance from Day One

Participate in the first governance conversation: what does this community stand for? What is permitted? Who makes decisions? The founding custodians write these answers. All future members inherit them.

3. Attend the First Three Sunday Sessions

Be present for the first three Sunday Sessions of your community. As a founding leader, your presence legitimises the platform for all who follow.

4. Invite the First 100 Members

Each founding custodian personally invites 20–30 peers before public launch. Nothing is more persuasive than a trusted colleague's direct invitation.

5. Participate in a Think Tank

Join at least one of the eight Think Tank domains. These are the intellectual spine of the community — structured conversations that produce real ideas and real action.

6. Give Honest and Specific Feedback

The platform improves continuously. Founding custodians are the most important source of early course-correction. We ask for honesty, not politeness.

"This is a community of consequence. Not a product, not a startup, not an app. A deliberate attempt to solve a real human problem — with technology as the enabler, and human relationships as the substance. What we are inviting you to is not a role. It is a founding act."

ANNEXURE A

The Vision at Horizon

What we are building is not an alumni portal. It is the infrastructure for a new kind of professional community — one that scales, self-sustains, and grows stronger with every new member and every new institute.

3–5 Years

30–100 Indian Institutes · 1–3 Lakh Verified Members

From AIIMS Delhi and IIT Delhi, the network expands to universities, medical colleges, IIMs, NITs, law schools, and professional bodies. Cross-institute features — mentoring, jobs, think tanks — become richer with every addition. Target: one to three lakh verified members on a single, trusted, non-commercial platform.

2030

Four Metro Physical Community Centres

By 2030, the vision includes physical community anchors in four Indian metros — Delhi, Mumbai, Bengaluru, and one more. These are not offices. They are spaces for Sunday Sessions, Think Tank meets, mentoring, and life's major transitions. The platform funds these centres. The communities own them.

Beyond 2030

A Global Answer to Urban Professional Isolation

Urban professionals worldwide carry the same college bonds as their most durable social identity. The same fragmentation and isolation exist in London, New York, Singapore, and Sydney. AlumBond's model — verified trust, community-first design, zero commercial compromise — is replicable across cultures and geographies. India is the laboratory. The world is the market.

ANNEXURE B

The Architecture of Expansion

The platform powering AlumBond is owned and operated by **Ritanya Sanstha,** co-founded by IIT Roorkee alumni. It provides the technology and operational support for multi-institute expansion. The alumni communities themselves remain non-commercial, volunteer-governed, and independent of each other.

A Platform Built at Scale — Ready for Your Community

The technology investment has already been made. The infrastructure is designed, deployed, and operating at the capacity required for one to three lakh members. Joining this platform does not require AIIMS Delhi to sponsor a technology build, negotiate a vendor contract, or wait for a development cycle.

Already Built

The platform has been designed, built and deployed at the scale of one to three lakh members. The investment in technology has already been made. Adding AIIMS Delhi — or any further institute — does not require new capital, new engineering work, or new external dependencies.

What Each Institute Keeps

Its own verified member base, its own branding and identity, its own community governance, its own founding custodians — and the full benefit of shared infrastructure that no single institute could afford to build alone.

From Fragmentation to Network Scale
